1. Engineering and the World Federation of Engineering Organizations
2. Engineering challenges for the 21st Century
3. The Diversity imperative for engineering
4. Positive steps for real change – the transformation of engineering education for a more diverse and inclusive profession

TOPICS

1. Engineering and the World Federation of Engineering Organizations

The World Federation of Engineering Organizations:

- **The peak body for professional engineering organizations**
- **Founded in 1968**
- **Under the auspices of UNESCO**
- **100+ national professional engineering institutions**
- **12 international and continental/regional professional engineering institutions**
- **Representing 30 million engineers**

Engineering for **Sustainable Development**

Marlene Kanga @MarleneKanga · 1m

Agree @antonioguterres as Immediate Past President of @wfeo I proudly led the proposal for #WorldEngineeringDay and delighted to see it celebrated globally as every #Engineer especially #women engineers strive to contribute to advance the #UNSDGs. It's our Day!

António Guterres ✓ @antonioguterres · Mar 5

As a trained engineer, I am passionate about the potential of engineering to help solve the most pressing challenges facing our world.

But to truly maximize that potential, we must ensure women & girls have equal opportunities & representation in this field.
#WorldEngineeringDay

The UN Secretary General agrees on the need for more women engineers, Twitter, 5 March 2021, Celebrating World Engineering Day

Engineers need to ensure that women benefit from new technologies and also participate in the technology revolution so no one is left behind

Women engineers working on high voltage electrical systems. © Chinese Society for Electrical Engineering, Chapter 1, UNESCO Engineering Report.

- **We need more engineers especially women engineers!**
- **Engineers** have developed technologies with enormous transformative potential in the digitally connected future workforce - including advanced automation, telecommunications, robotics and artificial intelligence.
- **Women engineers** are needed to contribute as diversity of thought is vital for innovation and the development of solutions that reflect community standards, values and aspirations for sustainable development.
- **New technologies empowering women** - mobile communications and the internet, for access to banking, entrepreneurship and improved outcomes for health, education and childcare.

WHY WE NEED DIVERSITY IN ENGINEERING

RELEVANCE & SUSTAINABILITY

- **Relevant team** – Members of the engineering team are similar to the community – in terms of age, ethnicity, gender etc.
- **Sustainable solutions** – diverse teams will understand and reflect community and stakeholder values and expectations and maintain the social license to operate
- **New technologies increasing disruption** – Successful navigation of disruptive technologies needs diverse teams

GOVERNANCE

- **Ethically sound** – promotes good governance
- **Efficient** – makes best use of all human resources and brain power
- **Equal opportunity** for all – a basic human right

PERFORMANCE

- **Encourages innovation** and reduces risk, better decisions, avoids “group think”, ensure a wide range of perspectives are considered
- **Enhances business performance** – financial, customer relationships, safety, sustainability
- **Enhances reputation**

Diversity is an opportunity that cannot be ignored

TOPICS

4. Working together for real change

A key goal is to ensure that engineering graduates have the attributes and skills to meet current and future needs by employers, industry and the community

Partnering with our international peers

- This project has been progressed in partnership with our peer international organisations in engineering
- Together we are working on joint objectives in education, training and sustainable development
- Partnerships with:
 - International Engineering Alliance (IEA)
 - International Federation of Engineering Education Societies (IFEES)
 - Federation of International Consulting Engineers (FIDIC)
 - International Network for Women Engineers and Scientists (INWES)
 - International Centre for Engineering Education (ICEE, UNESCO Category II Centre) at Tsinghua University, China
 - International Science Technology and Innovation Centre for South-South Cooperation (ISTIC, Malaysia, UNESCO Category II Centre)

UNESCO is a key partner for the review of engineering benchmarks for Graduate Attributes and Professional Competencies

The second **UNESCO Engineering Report – “Engineering for the SDGs”** recommends:

1. *“Government, engineering educators, industry and professional engineering institutions need to collaborate to increase the number and quality of engineers.*

2. *There is also a need to work in partnership to develop the necessary international engineering education benchmarks for sustainable development.*

3. *These need to be recognised across the world and form the basis of national engineering education systems for engineers with the right skills especially Asia, Africa and Latin America.”*

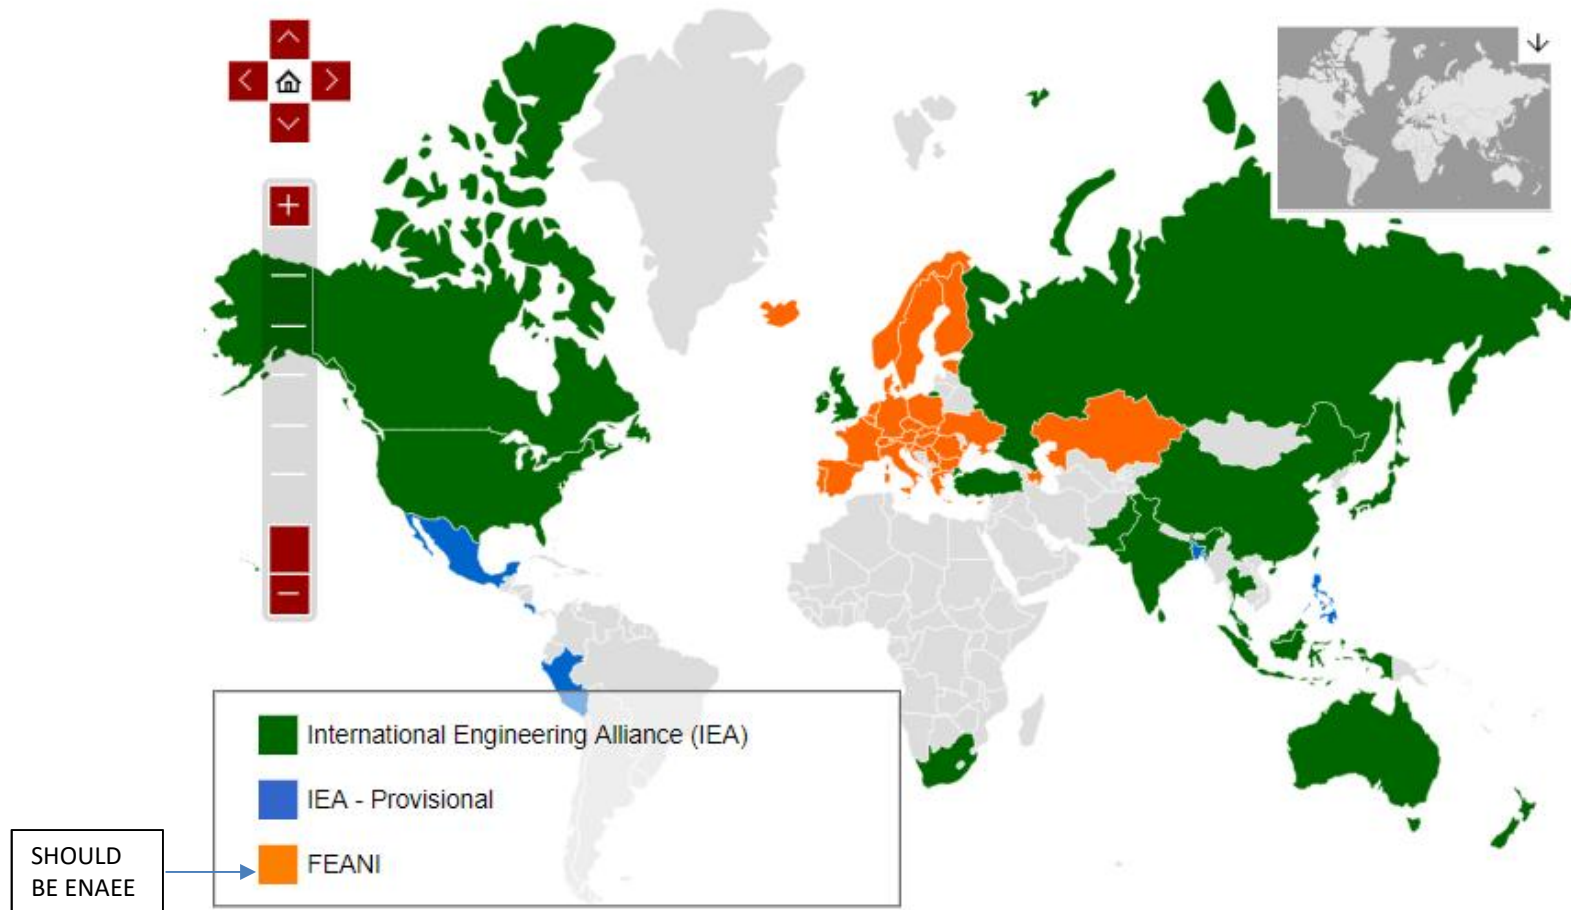

The International Engineering Alliance (IEA) and the benchmark Framework for Graduate Attributes and Professional Competencies (GAPC)

- **IEA is an umbrella organisation** that provides governance for the three Accords and four Agreements that provide international multilateral recognition of graduate attributes and professional competencies across 30 countries.
- For graduation after tertiary engineering education course*:
 - Washington Accord – Professional Engineer usually 4-5 years
 - Sydney Accord – Engineering Technologist usually – 3-4 years
 - Dublin Accord – Engineering Technician usually -2 years
- After graduation for professional registration, after a period of work experience:
 - Intl. Professional Engr. Agreement – Prof. Engineer
 - Intl. Technologist Engr. Agreement – Eng. Technologist
 - Intl. Associate Engr. Agreement – Eng. Technician
 - APEC Engineering Agreement – APEC Region- Prof. Engineer

* Note: The duration of academic formation will normally be at least sixteen years (Washington Accord), fifteen years (Sydney Accord) and 13 years (Dublin Accord).

Reach of International Engineering Alliance (IEA) Graduate Attribute and Professional Competency (GAPC) Benchmark

Source: <https://www.engc.org.uk/international-activity/international-relationships-map/>

The IEA GAPC Benchmark: Context

- **GAPC are stated generically** and are applicable to all engineering disciplines
- **Graduate attributes** form a set of individually assessable outcomes that are the components indicative of the graduate's potential to acquire competence to practice at the appropriate level. The attributes are clear, succinct statements of the expected capability.
- **Professional competency profiles** record the elements of competency necessary for competent performance that the professional is expected to be able to demonstrate in a holistic way at the stage of attaining registration.
- The graduate attributes identify the distinctive roles of **engineers, technologists and technicians**
- The professional competency profiles are written for each of the three categories: **engineer, engineering technologist and engineering technician** at the point of registration

Example – civil engineering - skills needed by engineers of the future

- It is estimated that 90% of the work of civil engineers is embedded in the excellent codes and standards that underpin much of civil engineering. These can be used to build automated systems that may take over routine design work and tasks that once took many months of effort will be processed by a computer in a matter of hours.
- Building Information Modelling (BIM), Simulation, optimization, and automation are transforming civil engineering and will be used for many tasks with little human intervention.

Engineering needs more brain power not muscle power

Engineering for Sustainable Development

© Marlene Kanga 2019-2021

Key areas for change

1. **Accommodate future needs** of engineering professionals and the profession – strengthen the required attributes on team work, communication, ethics, sustainability.
2. **Emerging technologies** – incorporate digital learning, active work experience, lifelong learning.
3. **Emerging and future engineering disciplines and practice areas** – while retaining discipline independent approach, enhance the skills on data sciences, other sciences, life-long learning.
4. **Incorporate UN Sustainable Goals** - in the development of solutions that consider diverse impacts – technical, environment, social, cultural, economic, financial and global responsibility **AND LEAVE NO ONE BEHIND**
5. **Diversity and Inclusion** – include these considerations within ways of working in teams, communication, compliance, environment, legal etc. systems.
6. **Intellectual agility, creativity and innovation** – emphasize critical thinking and innovative processes in design and development of solutions

Structure of GAPC Framework

The GAPC Comprises five tables:

1. **Table 1: Range of Problem Solving Capabilities** that distinguish the 4-5-year programs with engineer graduates from those that have a teaching duration of 3-4 years for technologists or 2 years for graduating technicians. Distinguishes between complex, broadly-defined and well-defined engineering problems.
2. **Table 2: Range of Engineering Activities** for an engineer, a technologist, and a technician, respectively.
3. **Table 3: Knowledge and Attitude Profile** of a graduate of an engineering program, i.e. the minimum requirements for the curriculum
4. **Table 4: Graduate Attribute Profiles the qualifications** (assimilated knowledge, skills, and attitudes) of an engineer/technologist/technician at the time of graduation.
5. **Table 5: Professional Competency Profiles** specifies the range of competency profiles for a qualified engineer/technologist/technician. These need to be attained, not only during school education but also, through lifelong learning and professional development to practice at an appropriate level.

Table 4 : Graduate Attribute Profile

- **Table 4: Graduate Attribute Profile - the qualifications** (assimilated knowledge, skills, and attitudes) of a professional engineer/technologist (3-4 year)/technician (2-3 year) are described.
- In this presentation - focus is on the professional engineer – usually 4-5 year degree.
- Attributes for technologists and technicians are described in the full in on the **UNESCO WFEO IEA Working Group webpage** which is available on the WFEO website <https://bit.ly/3fg8Fdh>

GAPC Table 4: Graduate Attribute Profile

Graduate attributes cover:

1. Engineering knowledge
2. Problem analysis
3. Design and development of solutions
4. Investigation and research
5. Usage of appropriate tools

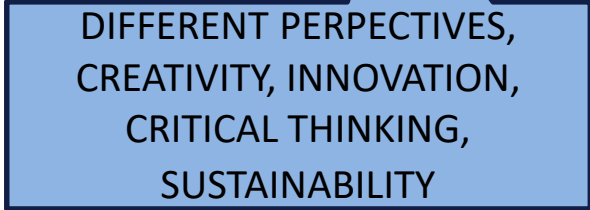

6. The engineer and society
7. Human, social and environmental impacts
8. Ethics

9. Individual and collaborative team work
10. Communication
11. Project Management and Finance
12. Preparation for lifelong learning

GAPC Table 4: Graduate Attributes (1)

Differentiating Characteristic	... for Washington Accord Graduate	BASICS + COMPUTING SKILLS
Engineering Knowledge: Breadth, depth and type of knowledge, both theoretical and practical	WA1: Apply knowledge of mathematics, natural science, computing and engineering fundamentals, and an engineering specialization as specified in WK1 to WK4 respectively to develop the solutions to of complex engineering problems	LATEST THINKING, CONSIDER IMPACTS FOR SUSTAINABLE DEVELOPMENT – FOR A BETTER WORLD
Problem Analysis Complexity of analysis	WA2: Identify, formulate, research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences with holistic considerations for sustainable development* (WK1 to WK4)	The graduate is expected to apply the latest thinking and holistically consider the implications for sustainable development 
Design/development of solutions: Breadth and uniqueness of engineering problems not previously been identified or codified	WA3: Design creative solutions for complex engineering problems and design systems, components or processes that meet identified specified needs with appropriate consideration for public health and safety, whole-life cost, net zero carbon as well as resource, cultural, societal, and environmental considerations as required (WK5)	A graduate is expected to consider the whole of life cost and net zero carbon impacts of solutions from cradle to cradle 

GAPC Table 4: Graduate Attributes (2)

Differentiating Characteristic	... for Washington Accord Graduate	Rationale for Change
Investigation: Breadth and depth of investigation and experimentation	WA4: Conduct investigations of <i>complex engineering</i> problems using <i>research methods including research based knowledge, i</i> (WK8) and analysis to provide information	The graduate is expected be able to <i>research latest technologies, trends and thinking</i> and including data analysis, draw <i>conclusions</i>
Modern Tool Usage: Level of understanding of the appropriateness of <i>technologies</i> and the tool	WA5: Create, select and apply appropriate techniques, and IT tools, including problem solving engineering problems with (WK2 and WK6)	The graduate is expected to use <i>data, modelling and computational techniques</i> to simulate possible solutions while <i>understanding the limitations</i> of the analysis and implications of assumptions made, using <i>critical thinking</i> .
The Engineer and the World: Level of knowledge and responsibility for sustainable development	sustainable development* outcomes <i>ability, and health and safety</i> work in solving (WK1, WK5, and WK7)	The engineer must be able to consider <i>broad outcomes for sustainable development – previous attribute that was more narrow has been replaced.</i>

LATEST RESEARCH AND TRENDS, CRITICAL THINKING

USE OF DATA AND MODELLING AND COMPUTATIONAL TOOLS

CONSIDER HUMAN SOCIAL ECONOMIC AND ENVIRONMENTAL IMPACTS

CONSIDER BROAD OUTCOMES FOR SUSTAINABLE DEVELOPMENT

GAPC Table 4: Graduate Attributes (3)

Differentiating Characteristic	... for Washington		Rationale for Change
Ethics: Understanding and level of practice	WA7: Apply ethics and responsibilities and adhere to the code of ethics and demonstrate inclusion (WK97)	ETHICS – BROADLY – TECHNOLOGY, DATA, HUMAN, COMPLY WITH LAWS, DIVERSITY AND INCLUSION	Ethical responsibilities for compliance with national and international laws and for diversity and inclusion has been added – a strong enforcement of the engineers' ethical responsibility for being inclusive. 
Individual and Collaborative Team work: Role in and diversity of team	WA8: Function effectively as an individual, and as a member or leader in a team and in multi-disciplinary teams (WK9)	A VOICE FOR EVERYONE - WORKING COLLABORATIVELY IN DIVERSE TEAMS IN THE BROADEST SENSE	The importance of working effectively in diverse teams by ethnicity, gender, age, location etc. has been added. 
Communication: Level of communication according to type of activities performed	WA9: Communicate effectively in complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and be able to communicate in the global context (WK9)	CONSIDER DIFFERENT PERSPECTIVES - INCLUSIVE COMMUNICATION – LANGUAGE, CULTURE, LEARNING DIFFERENCES	The importance of inclusive communication, written and verbal, taking account of cultural, language and other differences , has been added. 

GAPC Table 4: Graduate Attributes (4)

Differentiating Characteristic	... for Washington Accord Graduate	Rationale for Change
Project Management and Finance: Level of management required for differing types of activity	WA10: Demonstrate Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.	The engineer must apply knowledge and understand economic and management issues as a team leader .
Lifelong learning: Preparation for and depth of continuing learning. Duration and manner	WA11: Recognize the preparation and ability to learn independently and life-long learning ii) adaptability to new and emerging, technologies and iii) critical thinking in the broadest context of technological change (WK8)	The importance of creativity, adapting and learning about emerging technologies and technological change and critical thinking , has been added

Changing engineering education and professional competencies – for greater women's participation

CONSULTATION WEBINAR ON DIVERSITY AND INCLUSION

FRIDAY 31 July
1:00 PM - 2:30 PM CET

UNESCO IEA WFEO Draft Review of IEA Graduate Attribute and Professional Competency Framework (GAPC)

MODERATOR:

- Prof. Gong Ke
President, WFEO

SPEAKERS:

- Dr. Peggy Oti-Boateng
Director, Division of Science Policy and Capacity-Building, UNESCO
- Ms. Gall Mattson
President, INWES
- Prof. Bulent Ozguler
Chair, WFEO-IEA Working Group
- Dr. Marlene Kanga
Past President, WFEO
- Prof. Wai Ye Leong
Board Member, INWES
- Prof. Dawn Bonfield
WFEO Committee for Women in Engineering
- Ms. Yetunde Holloway
Chair, WFEO Committee for Women in Engineering

Register: <https://bit.ly/2OHX8rx>

4 QUALITY EDUCATION
5 GENDER EQUALITY
16 PEACE, JUSTICE AND STRONG INSTITUTIONS
17 PARTNERSHIPS FOR THE GOALS

Consultation and Partnership with International Engineering Alliance and other international organisations in engineering – educators, industry and women - to change Engineering Education Benchmarks for Graduate Attributes and Professional Competencies.

World Engineering Day for Sustainable Development

Creating Global Awareness of the need for Diversity

- **4th March every year**
- Declared by UNESCO as an international day
- An opportunity to engage with people, government, policy makers, students on the importance of engineering in our societies
- Encourage young people, boys and girls, to consider engineering as a career for positive change for a better sustainable world
- Its our celebration of engineering!!

See: <https://worldengineeringday.net/>

**WORLD
ENGINEERING
DAY** FOR SUSTAINABLE
DEVELOPMENT

**WOMEN
ENGINEERS CAN
CREATE**

**THE
WORLD
WE WANT**

Engineering for Sustainable Development

- Participation
- Influence
- Representation

The world's engineers
united in rising to
the world's challenges.
For a better, sustainable world.
